

# GROW YOUR ENERGY SAVINGS

INFORMATION SHEET  
COLORADO

## AGRICULTURAL ASSESSMENTS OVERVIEW

### Introducing our low-cost Business Energy Assessment solution to identify energy improvements specific to agricultural operations.

Reducing energy costs is an essential practice for profitable growers to meet operational and sustainability goals. Energy savings potentials in agriculture facilities can be found in many areas—from your lighting to HVAC and efficiency controls.

Targeting the most effective path to energy savings through an energy assessment is an effective way to prioritize a smart energy-improvement plan.

Our Business Energy Assessment program will help you gain energy insights and discover energy-efficiency projects customized for your operational needs and goals.

### Optimized steps to an effective energy assessment

On-site assessment by an energy expert of your agricultural equipment, facilities and systems.

On-the-spot low- or no-cost improvements such as equipment recalibration.

A customized Energy Roadmap report to guide your energy-saving strategies.

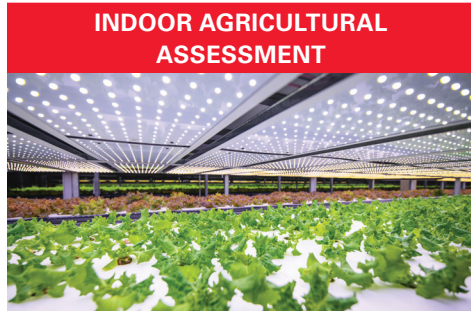

Regular meetings with energy experts and your selected team throughout the process.

Guidance to help you earn rebates for energy improvements made.

**Agricultural Energy Potentials**

With more and more demand on growers, farming-up is the order of the day. Adding efficiencies is an implementation practice that can improve bottom line. Here are just a few energy-efficiency opportunities to uncover.

**INDOOR AGRICULTURAL ASSESSMENT**

- Ventilation systems
- Variable speed drives
- Compressors
- Heating & heat recovery systems
- Cooling systems
- Lighting

**OUTDOOR AGRICULTURAL ASSESSMENT**

- Motors and fans
- Irrigation hardware
- Water heating
- Drying systems
- Pre-coolers
- Compressors

**Commercial Farming?**

If your growing operation requires an assessment for multiple buildings for a large production growing capacity, see our Strategic Energy Management program at [xcelenergy.com/SEM](http://xcelenergy.com/SEM).
