

Top reasons to replace your central heating and air conditioning systems at the same time.

- Yours may be older than dirt.
- Boost energy savings and increase comfort in all seasons when both heating and cooling systems are matched for high efficiency.
- Replacing both at the same time can often net you higher manufacturer discounts.
- New furnace fan motor technology—electronically commutated motor (ECM)—saves even more money in both the winter and summer months.

AND FOR A LIMITED TIME

Xcel Energy offers up to \$400 in heating rebates.

- \$120 Regular Furnace Rebate
- **\$180 Furnace BONUS Rebate (June 15 through November 30 only)**
- \$100 ECM Rebate

Savings that add up!

Heating and cooling costs the average homeowner about \$875 a year—nearly half the home's utility bill.

On average a home's furnace uses about 42% of that bill. Replacing your furnace when you replace your central AC could help you make the most of your energy savings.

– Energystar.gov

When you add in great rebates from Xcel Energy, you could pocket some big savings the very first year.
